The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high-priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high-quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public. Unless specifically noted, all information contained herein is in the public domain.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to

## Introduction

The 2020-21 National Teacher and Principal Survey (NTPS) ${ }^{1}$ is a nationally representative survey of public ${ }^{2}$ and private ${ }^{3} \mathrm{~K}-12$ schools, principals, and teachers in the 50 states and the District of Columbia. State-level data are also available for public schools, principals, and teachers. NTPS collects data on core topics including teacher and principal preparation, classes taught, school characteristics, and demographics of the teacher and principal labor forces. The survey is developed by the National Center for Education Statistics (NCES) of the Institute of Education Sciences (IES) within the U.S. Department of Education, and data are collected by the U.S. Census Bureau. This report presents basic estimates from the Public and Private School Data Files of the 2020-21 NTPS, the third collection of NTPS.

The purpose of NTPS is to collect data to provide a detailed picture of U.S. elementary and secondary schools and their staff. Data are collected through school, principal, and teacher surveys. Data on the three surveys can be linked using the school identification number (see the User's Manual for the 2020-21 National Teacher and Principal Survey Volumes 1-4, Petraglia et al. 2022).

The 2020-21 NTPS used a school-based sample of public and private schools. The selected samples included about 9,900 public schools and their principals, 68,300 public school teachers, 3,000 private schools and their principals, and 8,000 private school teachers.

Data were collected between October 2020 and August 2021. Items about how schools first adapted to the coronavirus (COVID-19) pandemic during the spring of 2020 were included in the School, Principal, and Teacher Questionnaires. See Berger et al. (2022) for an initial look at results from these items using preliminary NTPS data. In addition, an item was included at the beginning of each questionnaire asking about the current effect of COVID-19 on instruction at the school at the time the survey was completed during the 2020-21 school year. Topics in the 2020-21 NTPS school survey included

- General information about the school, such as the type of school, grades offered, types of before or after school programs available, and the length of the school day and school year;
- School staffing;
- Community services requirements; and

[^0]- Special programs and services, such as whether there were students with Individual Education Plans, ${ }^{4}$ students identified as English language learners, students who received Title I services, and whether the school participated in the National School Lunch Program.

The purpose of this First Look is to provide summaries of the new data collected using tables of descriptive information. Selected findings presented in the tables and text show the range of information available in the 2020-21 NTPS Public and Private School data files. Findings presented in the text do not include all differences in the tables and do not emphasize any one issue.

This First Look highlights findings from the NTPS public and private school surveys. Findings from the principal and teacher surveys are presented in two companion First Look reports:

- Characteristics of 2020-21 Public and Private K-12 School Principals in the United States: Results From the National Teacher and Principal Survey First Look (NCES 2022-112); and
- Characteristics of 2020-21 Public and Private K-12 School Teachers in the United States: Results From the National Teacher and Principal Survey First Look (NCES 2022-113).

Results shown in this report are not causal. Many of the variables in the report relate to one another, but only simple comparisons are presented, which do not account for all possible relationships. More information about NTPS can be found at https://nces.ed.gov/surveys/ntps.

## Selected Findings

- Nationwide, about 29 percent of public K-12 schools and 17 percent of private K-12 schools reported that they normally offered any courses entirely online prior to the coronavirus pandemic. Among traditional public schools that offered these online courses, 41 percent reported that few (1-10 percent of students) enrolled in the courses, and 20 percent reported that most ( 76 percent or more of students) enrolled in them, while among public charter schools, 26 percent reported that few students enrolled in them, and 36 percent reported that most students enrolled in them. Among private schools that offered any courses entirely online, 51 percent of Catholic schools reported that few students enrolled in the courses and 10 percent reported that most students enrolled in them (table A-1).
- Including full-time and part-time staff, public K-12 schools employed an estimated 144,490 school counselors, 65,920 psychologists, and 55,270 social workers in 2020-21. They also employed 103,850 speech therapists and 88,080 nurses, as well as 92,120 instructional coordinators and supervisors, 70,930 technology specialists, and 70,460 librarians/library media specialists. In addition, public schools employed a variety of full-time and part-time aides, such as 521,960 special education aides and 129,350 regular Title I aides. These schools also employed 53,290 security personnel ${ }^{5}$ and 63,000 school resource officers ${ }^{6}$ (table A-2).
- Among public K-12 schools, 50 percent of schools had staff with any specialist assignments. About 48 percent of all public schools had reading specialists, 23 percent had math specialists, and 7 percent had science specialists. In addition, 49 percent of public schools had staff with any academic coaching assignments, including coaches for reading ( 29 percent), math (20 percent), science ( 8 percent), and general instructional coaches (30 percent). Among private K-12 schools, 38 percent of schools had staff with any specialist assignments. About 32 percent of all private schools had reading specialists, 21 percent had math specialists, and 12 percent had science specialists. In addition, 29 percent of private schools had staff with any academic coaching assignments, including coaches for reading ( 15 percent), math ( 11 percent), science (7 percent), and general instructional coaches (23 percent) (table A-3).
- Overall, 49 percent of public K-12 schools and 35 percent of private K-12 schools offered instruction beyond the normal school day for students who need academic assistance. Additionally, 32 percent of public schools and 24 percent of private schools offered instruction beyond the normal school day for students who seek academic advancement or enrichment. Among public schools, a higher percentage of charter schools offered instruction beyond the normal school day for students who needed assistance (56 percent) or who sought academic advancement or enrichment (44 percent), compared to traditional public schools (48 percent and 31 percent, respectively) (table A-4).

[^2]- Among public K-12 schools, the average start time was 8:13 a.m., with elementary schools having a later average start time by a few minutes (8:16 a.m.) than middle (8:11 a.m.), combined/other (8:08 a.m.), and secondary/high (8:07 a.m.) schools. A higher percentage of public secondary/high schools ( 9 percent) had start times before 7:30 a.m. when compared to middle ( 6 percent), combined/other ( 3 percent), and elementary ( 3 percent) schools. Private K-12 schools had an average start time of 8:12 a.m., and 1 percent of private schools reported start times before 7:30 a.m. Additionally, the schools' official start times varied by the type of instruction schools reported they were offering as a result of COVID-19 at the time they completed the questionnaire. Public schools offering only distance-learning instruction as a result of COVID-19 had a later average start time by a few minutes (8:21 a.m.) than schools offering a hybrid of in-person and distance-learning instruction (8:11 a.m.) or those schools with only in-person instruction or for which they reported COVID-19 had no effect on the instruction (8:09 a.m.). Among private schools, those offering only distance-learning instruction as a result of COVID-19 had a later average start time (8:24 a.m.) than did schools offering a hybrid of in-person and distance-learning instruction (8:11 a.m.) or those schools with only in-person instruction or for which they reported COVID-19 had no effect on the instruction (8:12 a.m.) (table A-5).
- Among public K-12 schools, about 88 percent reported they were regular schools, 5 percent reported they were special program emphasis schools, ${ }^{7} 5$ percent reported they were alternative/other schools, ${ }^{8} 2$ percent reported they were special education schools, ${ }^{9}$ and 1 percent reported they were career/technical/vocational schools. ${ }^{10}$ Among private K-12 schools, about 81 percent reported they were regular schools, 7 percent reported they were special education schools, 5 percent reported they were Montessori schools, 3 percent reported they were special program emphasis schools, 3 percent reported they were alternative or other types of schools, and 1 percent reported they were early childhood programs or day care centers ${ }^{11}$ (table A-6).
- Among public K-12 schools that had teaching vacancies in a specific field, 42 percent found it very difficult or were not able to fill the vacancies for foreign language, 40 percent for special education, 37 percent for physical sciences, ${ }^{12} 32$ percent each for English as a second language or bilingual education and for mathematics, and 31 percent each for biology or life sciences, for computer science, and for career or technical education. Among private K-12 schools that had teaching vacancies in a specific field, 44 percent found it very difficult or were not able to fill the vacancies for special education, 35 percent for computer science, 32 percent for mathematics and for foreign languages, and 31 percent for physical science and for biology or life sciences (table A-7).

! Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 percent and 50 percent (i.e., the standard error is at least 30 percent and less than 50 percent of the estimate).
$\ddagger$ Reporting standards not met. Either there are too few cases for a reliable analysis, or the coefficient of variation (CV) for this estimate is 50 percent or greater (i.e., the standard error is 50 percent or more of the estimate).
${ }^{1}$ Includes non-law enforcement security guards or security personnel.
${ }^{2}$ Includes career law enforcement officers with arrest authority, who have specialized training and are assigned to work in collaboration with school organizations (School Resource Officers), and sworn law enforcement officers who are not School Resource Officers.
${ }^{3}$ Principals and teachers are not enumerated in the table as "other employees."
${ }^{4}$ Elementary schools offer at least one grade of K to 4 , and the number of elementary grades is higher than the number of middle grades. Middle schools offer at least one of grades 5 to 8 , and the number of middle grades is greater than the number of elementary or secondary grades. Secondary/high schools are defined as schools that enroll students in more of grades 9 through 12 than in lower grades. Combined/other schools include all other combinations of grades, including K-12 schools. School level categories in the 2020-21 NTPS differ from those in previous survey administrations; caution should be exercised when comparing estimates by level over time. For more information, see Appendix C: Description of Variables.
${ }^{5}$ Schools were asked to report the current effect of the coronavirus pandemic (COVID-19) on instruction at the school at the time they completed the survey. Thus, this was the reported effect on instruction at the time the survey was completed, not a summary of the school year.
NOTE: Data are weighted estimates of the population. Detail may not sum to totals because of rounding.

Table A-4. Library media center and before- or after-school programs or services: Percentage of schools with a library media center and that offered various programs or services before or after school for students in any grades K-12, by school type and selected school characteristics: 2020-21-Continued

|  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |

${ }^{1}$ A library media center is an organized collection of printed and/or audiovisual and/or computer resources, which is administered as a unit, is located in a designated place or places, and makes resources and services available to students, teachers, and administrators. A library media center may be called a school library, media center, information center, instructional materials center, learning resource center, or any other similar name.
${ }^{2}$ Elementary schools offer at least one grade of K to 4, and the number of elementary grades is higher than the number of middle grades. Middle schools offer at least one of grades 5 to 8 , and the number of middle grades is greater than the number of elementary or secondary grades. Secondary/high schools are defined as schools that enroll students in more of grades 9 through 12 than in lower grades. Combined/other schools include all other combinations of grades, including K-12 schools. School level categories in the 2020-21 NTPS differ from those in previous survey administrations; caution should be exercised when comparing estimates by level over time. ## Appendix B: Methodology and Technical Notes

## Overview of the NTPS School Survey

The National Teacher and Principal Survey (NTPS) is conducted by the National Center for Education Statistics (NCES) of the Institute of Education Sciences (IES) within the U.S. Department of Education. Data are collected by the U.S. Census Bureau on behalf of NCES. NTPS is a nationally representative sample survey of public and private K-12 schools, principals, and teachers in the 50 states and the District of Columbia. State representative data are also available for public schools, principal, and teachers. The NTPS was previously conducted during the 2015-16 and 2017-18 school years; 2020-21 is the third NTPS collection. The NTPS is the successor to the Schools and Staffing Survey (SASS), which was conducted seven times from the 1987-88 to 2011-12 school years.

The 2020-21 NTPS consisted of questionnaires for six types of respondents: public schools, private schools, public school principals, private school principals, public school teachers, and private school teachers. The information can be linked across teachers, principals, and schools by each sector (public and private). There is a separate data file for each type of respondent by sector (public school, private school, public school principal, private school principal, public school teacher, and private school teacher). NTPS collects data using core and rotating modules on each questionnaire. The core modules repeat every data collection cycle, while the rotating modules alternate data collection cycles. Core modules include items on topics such as teacher and principal preparation, classes taught, school characteristics, and demographics of the teacher and principal labor force. Rotating modules include items on important education topics, such as teacher and principal evaluation, professional development, working conditions, and school staffing. See table B-1 for additional information about the core and rotating modules. For the content of the questionnaires, see https://nces.ed.gov/surveys/ntps/questionnaires.asp.

## Table B-1. National Teacher and Principal Survey core and rotating questionnaire modules, by type of questionnaire respondent and data collection cycle

```
Core and Rotating Questionnaire Modules
    Teacher Questionnaires
        Core Modules (every cycle)
        - General employment and background information (including base salary, salary supplements, and demographic
            characteristics)
        - Professional experience and preparation for teaching
        - Class organization
        - Education and training
        - Certification
        Rotating Modules Set A (2015-16, 2020-21)
        - Early career experiences
        - Working conditions
        - School climate and teacher attitudes
        Rotating Modules Set B (2017-18)
        - Teacher evaluation
        - Teacher professional development
        - Teacher engagement
```

See notes at end of table.

Table B-1. National Teacher and Principal Survey core and rotating questionnaire modules, by type of questionnaire respondent and data collection cycle-Continued

## Core and Rotating Questionnaire Modules

Principal Questionnaires
Core Modules (every cycle)

- General information (including demographic characteristics)
- Principals' educational and professional experience
- Educational goals for students

Rotating Modules Set A (2015-16, 2020-21)

- Working conditions (including job duties)
- Perceptions (satisfaction and future plans)

Rotating Modules Set B (2017-18)

- Evaluation (of self and of teachers)
- Professional development (for self and for teachers)

School Questionnaires
Core Modules (every cycle)

- General information (including length of school day and school year)
- Community service requirements
- Special programs and services

Rotating Modules Set A (2015-16, 2020-21)

- School staffing

Rotating Modules Set B (2017-18)

- Instructional time
- School and classroom organization

SOURCE: National Teacher and Principal Survey-Questionnaires (https://nces.ed.gov/surveys/ntps/questionnaires.asp).
The 2020-21 NTPS data collection was conducted during the coronavirus (COVID-19) pandemic, which affected school operations starting in March 2020. Items about how schools first adapted to COVID-19 during the spring of 2020 were included on the School, Principal, and Teacher Questionnaires. See Berger et al. (2022) for an initial look at results from these items using preliminary NTPS data. In addition, an item was included at the beginning of each of these questionnaires asking about the current operational effect of COVID-19 on instruction at the school at the time the survey was completed during the 2020-21 school year. Additional information about this variable is provided in appendix C.

NTPS was designed to produce national, regional, and state estimates for public elementary and secondary schools, principals, and teachers, including public charter schools and the principals and teachers within them. For private schools, the sample supports national, regional, and affiliation strata estimates for schools, principals, and teachers. Because private schools were selected for sampling by affiliation strata and region rather than state, comparisons between public and private schools and their principals and teachers are possible only at the regional and national levels.

For additional information on the specific NTPS-related topics discussed in this appendix, consult the Survey Documentation for the 2020-21 National Teacher and Principal Survey (Cox et al. forthcoming) or the User's Manual for the 2020-21 National Teacher and Principal Survey Volumes 1-4 (Petraglia et al. 2022). To access additional general information on NTPS or for
electronic copies of the questionnaires, go to the NTPS home page (https://nces.ed.gov/surveys/ntps).

## Sampling Frames and Sample Selection

Public schools. The starting point for the 2020-21 NTPS public school sampling frame was the 2017-18 Common Core of Data (CCD) Nonfiscal School Universe data file, ${ }^{1}$ which was refreshed with data from the 2018-19 CCD to create the final sampling frame for the 2020-21 NTPS. The sampling frame was adjusted from the CCD to fit the definition of a school eligible for NTPS. To be eligible for NTPS, a school was defined as an institution or part of an institution that provides instruction to students in one or more of grades 1-12 or the ungraded equivalent, and has one or more teachers who provide instruction in one or more buildings apart from a private home or without a physical building. In addition, a public school receives public funds as primary support and is operated by an education agency.

The 2020-21 NTPS universe of public schools was confined to the 50 states plus the District of Columbia and excluded the other jurisdictions, Department of Defense overseas schools, and CCD schools that did not offer teacher-provided classroom instruction in grades 1-12 or the ungraded equivalent. This last group included schools that were essentially administrative units that may oversee entities that provide classroom instruction or may only provide funding and oversight. Although Bureau of Indian Education-funded (BIE) schools are eligible for NTPS and are included in the overall statistics, the sample size allocated does not support separate BIE estimates.

The NTPS definition of a school is generally similar to the CCD definition, with some exceptions. NTPS allows schools to define themselves. In past NCES data collections, Census Bureau staff observed that in situations where two or more schools have the same administration, these schools were reported separately on CCD but generally reported as one entity for sample surveys. Thus, CCD schools with the same location, address, and phone number were collapsed during the frame building on the assumption that the respondent would consider them to be one school. A set of rules was applied to determine in which instances school records should be collapsed together. When school records were collapsed together, the student and teacher counts, grade ranges, and names as reported to CCD were all modified to reflect the change. It was also possible for two or more schools with different administrations to share the same building; in that case, they were preserved as separate schools.

Finally, since CCD and NTPS differ in scope and their definition of a school, some records were deleted, added, or modified to provide better coverage and a more efficient sample design for NTPS. For a detailed list of frame modifications, see the Survey Documentation for the 2020-21 National Teacher and Principal Survey (Cox et al. forthcoming). After deleting, collapsing, and adding school records, the 2020-21 NTPS public school sampling frame consisted of about 87,000 traditional public schools and 8,500 public charter schools.

[^4]NTPS uses a systematic, probability proportionate to size (PPS) sample, where size is defined to be the square root of the number of full-time-equivalent (FTE) teachers in the school (for an explanation of PPS sampling, see Cochran 1977). Schools were stratified (explicitly and implicitly) and sampled (with probabilities determined by size as well as precision objectives) based on the following characteristics:

- school grade level (primary, middle, high, combined);
- state;
- poverty status (low, high);
- enrollment (less than 100, 100-199, 200-499, 500+);
- collapsed urbanicity (city, suburban, town, rural); and
- charter status (charter, traditional public).

In addition to oversampling based on specific school characteristics, sample sizes were inflated for schools in 29 states with smaller numbers of schools in order to ensure that all state-level estimates would meet the criteria required for publication.

Prior to sampling, schools were sorted by the following:

- smaller states (states that required oversampling in order to have an expected CV less than 30 percent vs. other states within each region);
- charter status (two levels);
- combined grade status (two levels);
- small school status (two levels);
- school grade level (four levels);
- urbanicity (four levels);
- poverty status (four levels);
- school size category (six levels);
- state; and
- number of FTE teachers.

This sample design and its associated precision requirements resulted in a total public school sample of about 9,900 public schools.

Private schools: The 2020-21 NTPS private school frame was based on the 2017-18 Private School Universe Survey (PSS) list frame and certainty area frame. In order to provide coverage of private schools founded after the PSS list frame was developed and to improve coverage and update frame information on existing private schools, the Census Bureau collected membership lists in early 2017 from private school associations and religious denominations. The associations were asked to list all schools meeting the PSS school definition. The Census Bureau also collected additional frame information (grade range, number of teachers, and number of students) during the refresh operation. To be eligible for NTPS, a school was defined as an institution or part of an institution that provides instruction to students in one or more of grades 1-12 or the ungraded equivalent, and has one or more teachers who provide instruction in one or more buildings apart from a private home or without a physical building. In addition, a private school is not supported
primarily by public funds. The 50 states and the District of Columbia were also asked to provide lists of private schools meeting the PSS definition of a school. Schools on the private school association membership lists and the state lists were compared to the 2017-18 PSS list frame. Any school that did not match to the 2017-18 PSS list frame was added to the existing 2020-21 PSS list frame. After these changes, the private school sampling frame consisted of about 23,200 private schools.

The NTPS private school sample that was drawn from the list frame was a systematic PPS sample, where size was defined to be the square root of the number of FTE teachers in the school. Schools were stratified (explicitly and implicitly) and sampled (with probabilities determined by size as well as precision objectives) based on the following characteristics:

- affiliation strata (Catholic, Baptist, Seventh-day Adventist/Lutheran, Jewish/other religious, nonsectarian special emphasis/special education, and nonsectarian regular);
- grade level (elementary, secondary, and combined);
- school size (large, small); and
- oversampling division (2 levels-mid-Atlantic states versus all others).

Prior to sampling, schools were sorted by the following:

- affiliation (three levels);
- grade level (three levels);
- Census region (four levels);
- urbanicity (four levels);
- affiliation (eleven levels);
- school size (five levels);
- state;
- highest grade;
- urbanicity (twelve levels);
- ZIP code;
- school enrollment; and
- PIN (unique school ID).

The 11 affiliation strata included 3 strata for Catholic (parochial, diocesan, and private); one stratum each for Baptist, Jewish, Lutheran, Seventh-day Adventist, and other religious; and 3 strata for nonsectarian (regular, special emphasis, and special education).

In the 2020-21 NTPS, all area frame schools were selected with certainty. Of the 3,000 private schools sampled for the 2020-21 NTPS, 2,745 were from the list frame and 255 were from the area frame.

## Data Collection Procedures

In 2020-21, NTPS employed a combined mail-based and internet survey approach, with subsequent telephone, mail, and e-mail follow-up. Data collection included the Teacher Listing Form (TLF), Principal Questionnaire, School Questionnaire, and Teacher Questionnaire. This report focuses on the School Questionnaire.

The 2020-21 NTPS data collection was conducted during the coronavirus pandemic, which affected school operations starting in March 2020. An item was included at the beginning of each non-TLF questionnaire asking about the current operational effect of COVID-19 on instruction at the school at the time the survey was completed during the 2020-21 school year. Additional information about this item is provided in appendix C.

Initial school packages, including the School Questionnaire, were mailed in October 2020. ${ }^{2}$ Next, schools were telephoned to verify school information, establish a survey coordinator, and follow up on the TLF if the school had not already provided an electronic teacher list. Data collection for the school and principal surveys ended in July 2021 and for the teacher survey in August 2021.

For some schools, the early phases of data collection also used survey coordinators. The role of the survey coordinator was designed to improve response by having the coordinator be the primary contact person at the school who could remind staff to complete their questionnaires, and collect completed questionnaires if applicable. However, due to the effects of COVID-19 on school operations during the 2020-21 school year, the use of survey coordinators was discontinued later in data collection, with school, principal, and teacher packages being mailed directly to principals and teachers.

The Web was the primary mode of data collection for all questionnaire types for the 2020-21 NTPS. Paper questionnaires were introduced in the later mailings.

## Data Processing and Imputation

For questionnaires completed on paper, the Census Bureau checked the questionnaires, keyed the data, and implemented quality control procedures. These data were combined with responses from questionnaires completed online, and those that had a preliminary classification of a complete interview were submitted to a series of computer edits consisting of a range check, a consistency edit, ${ }^{3}$ a blanking edit, ${ }^{4}$ and a logic edit. ${ }^{5}$ After these edits were implemented and reviewed by analysts, the records were put through another edit to make a final determination as

[^5]to whether the case was eligible for the survey and whether sufficient data had been collected for the case to be classified as a complete interview.

After the final edits were run, cases with "not-answered" values for items remained. Values were imputed for these cases using two main approaches. First, donor respondent methods, such as hot-deck imputation, were used. Second, if no suitable donor case could be matched, the few remaining items were imputed using mean or mode from groups of similar cases to impute a value to the item with missing data. After each stage of imputation, data checks were used to verify that the imputed data were consistent with the existing questionnaire data for other response fields. If the imputed data were inconsistent with the existing questionnaire data, the imputed value was removed by one of these computer edits due to inconsistency with other data within the same questionnaire or because it was out of the range of acceptable values. In these situations, Census Bureau analysts looked at the items and tried to determine an appropriate value. Edit and imputation flags, indicating which edit or imputation method was used, were assigned to each relevant survey variable. For further information, see the sections on data processing and imputation in the Survey Documentation for the 2020-21 National Teacher and Principal Survey (Cox et al. forthcoming).

## Response Rates

Unit response rates. The unit response rate indicates the percentage of sampled cases that met the definition of a complete interview. The weighted NTPS unit response rate was produced by dividing the weighted number of respondents who completed questionnaires by the weighted number of eligible sampled cases, using the initial base weight (the inverse of the probability of selection). ${ }^{6}$ The weighted response rate using the initial base weight was 65.6 percent for public schools and 61.4 percent for private schools. Table B-2 provides response rates for public and private schools by selected school characteristics used in sampling and weighting.

[^6]Table B-2. Weighted unit response rates for public and private $\mathrm{K}-12$ schools, using the initial base weight, by school type and selected school characteristics: 2020-21

| School type and selected school characteristic | Response rate |
| :---: | :---: |
| All public schools | 65.6 |
| School classification |  |
| Traditional public | 65.8 |
| Charter school | 63.4 |
| Community type |  |
| City | 51.9 |
| Suburban | 64.4 |
| Town | 76.6 |
| Rural | 76.0 |
| School level ${ }^{1}$ |  |
| Primary | 65.8 |
| Middle | 66.7 |
| High | 61.4 |
| Combined | 71.8 |
| Student enrollment |  |
| Less than 100 | 69.5 |
| 100-199 | 71.6 |
| 200-499 | 67.9 |
| 500-749 | 63.6 |
| 750-999 | 61.3 |
| 1,000 or more | 57.3 |
| Percent of K-12 students who were approved |  |
| Less than 35 | 66.8 |
| 35-49 | 71.9 |
| 50-74 | 68.1 |
| 75 or more | 57.4 |
| All private schools | 61.4 |
| School classification |  |
| Catholic | 71.2 |
| Other religious | 56.0 |
| Nonsectarian | 62.1 |
| Community type |  |
| City | 60.4 |
| Suburban | 64.0 |
| Town | 77.5 |
| Rural | 52.5 |
| School level ${ }^{2}$ |  |
| Elementary | 70.1 |
| Secondary | 69.4 |
| Combined | 49.1 |
| Student enrollment |  |
| Less than 100 | 56.7 |
| 100-199 | 71.1 |
| 200-499 | 64.5 |
| 500-749 | 55.8 |
| 750 or more | 55.1 |

${ }^{1}$ The school level variable used for public school sampling, weighting, and reporting of response rates was created from the public school sampling frame (the Common Core of Data Nonfiscal School Universe data file). It differs from the school level analysis variable, which was created using information about the specific grades taught at the school as reported on the NTPS School Questionnaire. These two variables are similar but not identical among responding public schools; more than 95 percent of responding schools reported a school level that was consistent with their school level on the sampling frame. Because the analysis variable was created from questionnaire data rather than the sampling frame and is therefore unavailable for nonresponding schools, response rates are not available by this variable. ${ }^{2}$ The school level variable used for private school sampling, weighting, and reporting of response rates was created from the private school sampling frame (the Private School Universe Survey list frame and certainty area frame). It differs from the school level analysis variable, which was created using information about the specific grades taught at the school as reported on the NTPS Private School Questionnaire. These two variables are similar but not identical among responding private schools; more than 70 percent of responding schools reported a school level that was consistent with their school level on the sampling frame. Because the analysis variable was created from questionnaire data rather than the sampling frame and is therefore unavailable for nonresponding schools, response rates are not available by this variable.
NOTE: Response rates were weighted using the inverse of the probability of selection and adjusted, if needed, to reflect multiple chances of selection from the frame or other situations, such as subsampling.
SOURCE: U.S. Department of Education, National Center for Education Statistics, National Teacher and Principal Survey (NTPS), "Public School and Private School Documentation Data Files," 2020-21.

Unit nonresponse bias analysis. Because the NCES Statistical Standards (4-4) require analysis of nonresponse bias for any survey stage with a base-weighted response rate less than 85 percent, the NTPS school data were evaluated for potential bias. The following frame characteristics were used in the nonresponse bias analysis for the Public Schools data:

- Charter status: traditional public, charter;
- Enrollment: less than 100,100 to less than 200,200 to less than 500,500 to less than 750 , 750 to less than $1,000,1,000$ or more;
- Percent of enrollment with race other than White: less than 5 percent, 5 to less than 10 percent, 10 to less than 20 percent, 20 to less than 30 percent, 30 to less than 50 percent, 50 percent or more;
- Percent free or reduced-price lunch eligible: less than 35 percent, 35 to less than 50 percent, 50 to less than 75 percent, 75 percent or more;
- Community type (locale): city, suburb, town, rural;
- Pupil-teacher ratio: less than 10,10 to less than 15,15 to less than 20,20 or more;
- Grade level: primary, middle, high, combined;
- Region: Northeast, Midwest, South, West;
- Number of teachers: less than 10,10 to less than 25,25 to less than 50,50 to less than 75 , 75 or more;
- Title I status: Title I program, Title I noneligible, Title I eligible but no Title I program; and
- State: 50 states and District of Columbia.

The following frame characteristics were used in the nonresponse bias analysis for the Private Schools data:

- Affiliation (3 level): Catholic, other religious, nonsectarian;
- Affiliation (11 level): Catholic-Parochial, Catholic-Diocesan, Catholic-Private, Baptist, Jewish, Lutheran, Seventh-day Adventist, Other religious, Nonsectarian-Regular, Nonsectarian-Special Emphasis, Nonsectarian-Special Education;
- Enrollment: less than 100,100 to less than 200,200 to less than 500,500 to less than 750 , 750 or more;
- Community type (locale): city, suburb, town, rural;
- Grade level: elementary, secondary, combined;
- Region: Northeast, Midwest, South, West; and
- Number of teachers: less than 5, 5 to less than 15,15 to less than 30, 30 to less than 50 , 50 or more.

First, the base-weighted distributions of the frame characteristics for responding schools were compared to the base-weighted distributions of the frame characteristics for sampled schools using $t$ tests, with significant differences indicating potential nonresponse bias prior to weighting adjustments. Tables B-3 and B-4 present national-level groups with a statistically significant difference in base-weighted percentages between the sampled cases and respondents for public and private schools, respectively. Additionally, the unit base-weighted response rate of each school group was compared to the overall base-weighted response rate through a $t$ test and the

SOURCE: U.S. Department of Education, National Center for Education Statistics, National Teacher and Principal Survey (NTPS), "Private School Documentation Data File," 2020-21.
base-weighted distribution of responding schools and the base-weighted distribution of nonrespondents were compared through a likelihood ratio chi-square test to find any groups that would have been over- or under-represented by the respondents without nonresponse adjustment. The results for each set of tests were consistent with the results presented in tables B-3 and B-4. Each school group listed in tables B-3 and B-4 had a significant difference in response rate from the overall response rate and the respondents and nonrespondents had different distributions by each sampling characteristic listed in table B-3 (for public schools) or B-4 (for private schools).

Weighting adjustments were designed to reduce or eliminate nonresponse bias and to reduce the variance introduced due to sampling by adjusting the sample estimates to known totals from the
frame. The final-weighted comparisons to eligible cases shown in tables B-3 and B-4 reflect the effect of weighting adjustment. These tables show that weighting adjustments eliminated most but not all evidence of potential bias for public and private schools. In addition, evidence of potential bias formed for some items as a result of the weighting adjustments.

For public schools (see table B-3), there is evidence of potential bias after weighting adjustments for the following national-level and state-level items included in the nonresponse bias analysis:

- school type, charter and traditional public;
- percent non-White students, for schools with less than 5 percent non-White students;
- percent of students eligible free or reduced-price lunch, for schools where less than 35 percent or 35 percent to less than 50 percent of students were eligible for free or reduced-price lunches;
- school level, for high and combined;
- region, for schools in the Midwest and West regions;
- schools with the Title I non-eligible; and
- state, for schools in California, District of Columbia, Florida, Hawaii, Idaho, Kentucky, Maine, Maryland, Montana, Nevada, New Mexico, North Dakota, Ohio, Oregon, Utah, and Washington.

For private schools (see table B-4), there is evidence of potential bias after weighting adjustments for the following national-level items included in the nonresponse bias analysis:

- school enrollment, for schools with 100 to less than 200 enrollment;
- school level, for elementary, secondary and combined;
- region, for schools in the Northeast and Midwest regions; and
- number of teachers, for schools with less than 5,5 to less than 15 , and 50 or more teachers.

For further information on unit response rates and nonresponse bias analysis, see the Survey Documentation for the 2020-21 National Teacher and Principal Survey (Cox et al. forthcoming).

Item response rates. The item response rate indicates the percentage of respondents who answered a given survey question or item. The weighted NTPS item response rate is calculated by dividing the weighted number of respondents who provided an answer to an item by the weighted number of respondents who were eligible to answer that item. ${ }^{7}$ Table B-5 provides a summary of the weighted item response rates. For the public school data, nine of the survey items included in this report have item response rates less than 85 percent. Those items were:
(1) number of full-time data coaches or data coordinators (question 2-2e);
(2) number of full-time technology specialists (question 2-2f);
(3) number of full-time aides, English as a second language or bilingual teacher aides (question 2-2h[2]);
(4) number of full-time aides, library media center aides (question 2-2h[4]);

[^8](5) number of full-time aides, other classroom aides (question 2-2h[5]);
(6) number of full-time security guards or security personnel (question 2-2l);
(7) number of full-time school resource officers (question 2-2m);
(8) number of full-time sworn law enforcement officers who are not school resource officers (question 2-2n); and
(9) number of full-time other employees not reported above (question 2-2o).

For the private school data, 22 of the survey items included in this report have item response rates less than 85 percent. Those items were:
(1) number of full-time vice principal and assistant principal (question 2-2b);
(2) number of part-time data coaches or data coordinators (question 2-2e);
(3) number of part-time technology specialists (question 2-2f);
(4) number of part-time social workers (question $2-2 \mathrm{~g}[3]$ );
(5) number of part-time psychologists (question 2-2g[4]);
(6-7) number of full-time and part-time ESL or bilingual teacher aides (question 2-2h[2]);
(8) number of full-time special education aides (question 2-2h [3]);
(9) number of full-time library media center aides (question 2-2h [4]);
(10) number of full-time other classroom aides (question 2-2h [5]);
(11) number of full-time secretaries and other clerical support staff (question 2-2i);
(12-13) number of full-time and part-time food service personnel (question 2-2j);
(14) number of full-time custodial and maintenance personnel (question 2-2k);
(15-16) number of full-time and part-time security guards or security personnel (question 2-2l);
(17-18) number of full-time and part-time school resource officers (question 2-2m);
(19-20) number of full-time and part-time sworn law enforcement officers who are not school resource officers (question 2-2n); and
(21-22) number of full-time and part-time other employees not reported above (question 2-20).
For further information on item response rates and bias analysis, see the Survey Documentation for the 2020-21 National Teacher and Principal Survey (Cox et al. forthcoming).

Table B-5. Summary of weighted item response rate, by survey: 2020-21

|  | Percent of items with a <br> response rate of | Percent of items with a <br> response rate of <br> less than 85 percent |
| :--- | ---: | ---: |
| Survey | $\mathbf{8 5}$ percent or more | 8.2 |
| Public School | 91.8 | 81.9 |
| Private School | 8.9 | 18.1 |

## Weighting

The general purpose of weighting is to scale up the sample estimates to represent the target survey population. For NTPS, a base weight was used as the starting point. In most cases, this base weight was the reciprocal of the unit's probability of selection on the frame (the initial base weight), and in other cases, adjustments were made to this frame base weight to reflect multiple chances of selection from the frame or other situations such as subsampling.

Next, a series of nonresponse adjustment factors were calculated and applied based on a weighting cell adjustment. Weighting cells were developed using tree search algorithms. These cells were selected to be homogeneous in response propensity within cells and heterogeneous in response propensity across cells (response propensity is the underlying chance that a particular sample unit will respond by completing the questionnaire: its individual response rate). The adjustment was the inverse of the weighted response rate within each cell, and each respondent in the cell received this adjustment. Nonrespondents were given weights of zero and the respondents were reweighted to represent the nonrespondents. The variables included in the tree search algorithms overlap substantially with those examined for potential bias, and included all subgroups that showed potential bias (listed in tables B-3 and B-4). For public schools, the variables used in the tree search algorithm were enrollment, percent of enrollment with race other than White, percent free or reduced-price lunch eligible, community type, region, number of teachers, state, and special district flag; all but special district flag were also used in the bias analysis. For private schools, the variables used were affiliation, enrollment, community type, region, and number of teachers; all were also used in the bias analysis. These variables may show differential response conditional on other subgroups (i.e., they may be chosen as cell generators by the tree search algorithm within particular branches).

Finally, for the school file, a raking factor was calculated and applied to the sample to adjust the sample totals to the frame totals, so that the sum of the weights within each of the specified cells was equal to the corresponding frame total for the cell. For public schools, these cells were defined based on school level, urbanicity, and percentage of students eligible for free or reducedprice lunch; and for private schools, the cells were defined based on school level, affiliation, and urbanicity. The weights were then adjusted to the control totals by an iterative process, referred to as raking, until the weights simultaneously aggregated to be equal to each set of control totals. In some cases, extreme weights may be trimmed back to a cutoff value. This all improves the precision of survey estimates.

The product of these factors is the final weight for each NTPS respondent, which appears as SFNLWGT on the NTPS Public and Private School Data Files.

## Variance Estimation

In surveys with complex sample designs, such as NTPS, direct estimates of sampling errors that assume a simple random sample typically underestimate the variability in the estimates. The NTPS sample design and estimation include procedures that deviate from the assumption of simple random sampling, such as sampling with differential probabilities.

NTPS uses jackknife replication to calculate appropriate sampling errors that account for the complex sample design. Jackknife replication methods involve dropping a small portion of the sample from the full sample and computing the statistic of interest for the retained and reweighted sample (the jackknife replicate). The sum of squares of the replicate estimates around the full sample estimate provides an estimate of the variance of the statistic. The NTPS school data file included a set of 200 replicate weights designed to produce variance estimates. The set of replicate weights for each file should be applied to the respondents in that file. The replicate weights for NTPS respondents are SREPWT1-SREPWT200 for schools.

## Reliability of Data

A survey estimate is subject to two types of errors: nonsampling and sampling. Nonsampling errors are attributed to many sources, including definitional difficulties, the inability or unwillingness of respondents to provide correct information, differences in the interpretation of questions, an inability to recall information, errors made in collection (e.g., in recording or coding the data), errors made in processing the data, and errors made in estimating values for missing data. Quality control and edit procedures were used to reduce errors made by respondents, coders, and interviewers. In contrast, sampling errors result from the collection of data from a sample of the population rather than the full target population, and estimates of the magnitude of sampling error for NTPS data can be derived or calculated. The survey estimates may differ from the values that would be obtained from a census of the target population using the same questionnaire, instructions, and interviewers.

## Caution Concerning Comparisons of Estimates

The 2020-21 NTPS data collection was conducted during the coronavirus pandemic, which affected school operations starting in March 2020 and throughout the 2020-21 school year. The disruption to instruction during the 2020-21 school year may have affected responses provided to items on the school, principal, and teacher surveys. As a result, the data collected might reflect the unique circumstances of the 2020-21 school year. For example, the question on the principal survey asking about the percentage of time a principal spent on various tasks in the school, including student and parent interactions, may have been affected by the prevalence of online and hybrid instruction in schools during the 2020-21 school year. On the school survey, questions about staff counts and students receiving special programs and services may have been affected by educational disruptions. On the teacher survey, questions about class organization, teacher working conditions, school climate and teacher attitudes, and general employment information (particularly earnings from sources other than their base teaching salary) may have been affected
by disruptions teachers faced during the coronavirus pandemic. Other changes in responses may have occurred where respondents had difficulty answering items that were designed and tested for in-person instruction, for example, the question on the School Questionnaire asking about average daily attendance, or questions on the Teacher Questionnaire asking about instructional time during a typical school week. See Spiegelman, Kephart, and Katz (2021) for a discussion of some of these issues. Note that these survey questions are examples, rather than an exhaustive list. Data users should keep these disruptions and challenges in mind when comparing responses on the 2020-21 NTPS to responses on previous NTPS and SASS data collections. Please also note that respondents were asked to report their school's instructional status at the time they completed the survey (i.e., fully in-person instruction, a hybrid of in-person and remote instruction, fully remote instruction). This provides contextual information about the circumstances under which the survey was completed and does not capture information about a school's official operating status(es) during the 2020-21 school year. Additional information about this variable is provided in appendix C .

Data collection operations for the 2020-21 NTPS differed from past cycles due to COVID-19. For example, initial materials were mailed to schools starting in October 2020, rather than in September. Historically, schools, principals, and teachers received approximately the same number of mail and e-mail contacts. For the 2020-21 NTPS, additional e-mails, unaccompanied by mailed materials, were sent to staff. While previous NTPS administrations used both telephone and in-person follow-up operations, the 2020-21 only followed up by telephone. For more information, please see the Survey Documentation for the 2020-21 National Teacher and Principal Survey (Cox et al. forthcoming).

The 2020-21 NTPS categorizes school level differently for analysis than previous years of NTPS. In 2020-21, public schools are grouped into elementary, middle, secondary/high, and combined/other, and private schools are grouped into elementary/middle, secondary/high, and combined/other. These groupings are described in appendix C. In contrast, earlier NTPS surveys categorized public schools as primary, middle, high, and combined, and private schools as elementary, secondary, and combined. Due to these changes in categorization, users should exercise caution when comparing estimates by school level between the 2020-21 NTPS and previous years.

The 2017-18 and 2020-21 NTPS collected information on the National School Lunch Program differently than previous years of both NTPS and SASS. Rather than asking for a count of K-12 students approved for the program, schools were asked to report the percentage of K - 12 students approved for the program. Additionally, schools that did not participate in the program were previously treated as a separate category for reporting purposes, but in the 2017-18 and 2020-21 reports, they are grouped with schools that participated in the program but had no students approved for the program. This change was made due to the small size of the number of schools that did not participate and the categories used for sampling, calculating response rates, and conducting bias analyses. Due to both the change in the question and the change in categorization of non-participating schools for 2017-18 and 2020-21, users should exercise caution when comparing estimates for, or reported by, the percentage of students approved for free or reducedprice lunches.

## Appendix C: Description of Variables

## Description of Variables

The variables that are included in this report are listed in table C-1. Those with variable names that begin with " $S$ " and are followed by four digits are survey variables that come from items on the Public and Private School Questionnaires. The variables without the letter plus four-digit names are derived variables, meaning they were created using survey variables, frame variables (variables taken from the sampling frame), other created variables, or a combination of these. They are frequently used in National Center for Education Statistics publications and have been added to the data files to facilitate data analysis. The definitions for the created variables follow table C-1.

Table C-1. Variables used in the Characteristics of 2020-21 Public and Private K-12 Schools in the United States: Results From the National Teacher and Principal Survey report: 2020-21

|  | Variable name <br> in data files |
| :--- | ---: |
| Variable | CHARFLAG |
| Charter school identifier ${ }^{1}$ | S1272-S1284 |
| Fill the vacancy in different fields | SO600 |
| How classes normally taught at this school | S1906 |
| Reported effect of COVID-19 on instruction ${ }^{1}$ | SO117 and S0131 |
| Official start time at the school | NSLAPP_S |
| Percentage of students in the school approved for the National School Lunch Program ${ }^{1}$ | S1905 |
| Percentage of students typically enrolled in at least one online class | SO120 |
| School type | SCHLEV_CCD |
| School level ${ }^{1}$ | S1212-S1263 |
| Staff-full-time/part-time positions or assignments | SCHSIZE |
| Student enrollment in K-12 and ungraded ${ }^{1}$ | RELIG |
| Three-category private school typology ${ }^{1}$ | URBANS12 |
| Urban-centric school locale code ${ }^{1}$ | S0144 |
| Whether the school has before-school or after-school program for students who need assistance | S0145 |
| Whether the school has before-school or after-school program for students who seek advancement | SO146 |
| Whether the school has before-school or after-school day care programs | SO147 |
| Whether the school has before-school or after-school related activities and clubs | S1270 |
| Whether the school has general instructional/not subject-specific coach(es) | S1268 |
| Whether the school has math coach(es) | S1265 |
| Whether the school has math specialist(s) | S1267 |
| Whether the school has reading coach(es) | S1264 |
| Whether the school has reading specialist(s) | S1269 |
| Whether the school has science coach(es) | S1266 |
| Whether the school has science specialist(s) | S0125 |
| Whether the school offers any courses entirely online |  |

${ }^{1}$ The definition for this variable can be found in Appendix C: Description of Variables. SOURCE: U.S. Department of Education, National Center for Education Statistics, National Teacher and Principal Survey (NTPS), "Public School and Private School Data Files," 2020-21.

Charter school identifier (CHARFLAG): A flag variable taken from the Public School Data File that identifies charter schools. $1=$ School is a public charter school, $2=$ School is a traditional public school. A charter school is a public school that, in accordance with an enabling state statute, has been granted a charter exempting it from selected state or local rules and regulation. CHARFLAG is based on SO500 from the Public School Data File.

Percentage of students in the school approved for the National School Lunch Program (NSLAPP_S): Taken from the Public School and Private School Data Files, NSLAPP_S is a continuous variable for the percentage of K-12 students (SO427) approved for the National School Lunch Program, among schools that participated in the National School Lunch Program (NSLP) (S0409=1). For this report, NSLAPP_S is recoded as a categorical variable describing the proportion of students approved for free or reduced-price lunches. Schools that did not participate in the NSLP have valid skip values, but were categorized as having no approved students for the purposes of this report.

School level (SCHLEV_CCD): School level for both public and private schools, based on guidelines set by the Common Core of Data (CCD). Information about grades offered by the school came from the NTPS school survey. For cases where the school was a non-interview for NTPS, sample file (CCD for public or Private School Survey for private) or other information was used to impute (if available). School levels for SCHLEV_CCD are defined in the CCD guidelines as:

- Elementary: offer at least one grade of K to 4 , and the number of elementary grades is higher than the number of middle grades.
- Middle: offer at least one of grades 5 to 8, and the number of middle grades is greater than the number of elementary or secondary grades.
- Secondary: offer at least one of grade 9 to 11 , the number of secondary grades is greater than the number of middle grades, and do not offer grade 12.
- High: offer grade 12 , and if other secondary grades are offered, the number of secondary grades is greater than the number of middle grades.
- Ungraded: offer only ungraded instruction.
- Other: offer both elementary and secondary/high grades, or grades in all three levels (elementary, middle, secondary/high).

For this report, SCHLEV_CCD was recoded into four categories for public schools and three categories for private schools, as follows:

## Public schools

- Elementary;
- Middle;
- Secondary/high; and
- Combined/other (aggregation of Ungraded and Other).

## Private schools

- Elementary/middle;
- Secondary/high; and
- Combined/other (aggregation of Ungraded and Other).

Student enrollment in K-12 and ungraded (SCHSIZE): Taken from the Public School and Private School Data Files, SCHSIZE is a categorical variable based on the number of K-12 and ungraded students enrolled in the school (SO115 for public and S4115 with S0151 subtracted for private). For this report, SCHSIZE was recoded into six categories for public schools and five categories for private schools.

Three-category private school typology (RELIG): Taken from the Private School Data File, RELIG is a three-category variable based on the variables that identify the religious or nonreligious orientation of a private school (SO186-SO297 and S0320-S0321): Catholic, Other religious, or Nonsectarian.

Urban-centric school locale code (URBANS12): Taken from the Public and Private School Data Files, URBANS12 is a created variable collapsed from the 12-category urban-centric school locale code (SLOCP12) that was updated to incorporate Census population and geography information and recoded into four categories, as follows:

- City: includes city, large; city, midsize; city, small;
- Suburban: includes suburb, large; suburb, midsize; suburb, small;
- Town: includes town, fringe; town, distant; town, remote; and
- Rural: includes rural, fringe; rural, distant; rural, remote.

## Variable About the Reported Effect of COVID-19 on Instruction

In addition to the core and rotating topics described in table B-1, the 2020-21 NTPS included a question asking about the current effect of the coronavirus pandemic on instruction at the school at the time the survey was completed. Given the start date for the 2020-21 NTPS, the length of the data collection window, and predictions about the 2020-21 school year, the COVID-19-related questions focused on how schools adapted to the COVID-19 pandemic during the spring of 2020. In addition, schools were asked to report the current effect of the coronavirus pandemic on instruction at the school at the time they completed the survey. Schools were asked to indicate whether they were currently offering only distance-learning instruction because of the coronavirus pandemic, currently offering a hybrid of in-person and distance-learning instruction because of the coronavirus pandemic, currently offering only in-person instruction with additional safety precautions because of the coronavirus pandemic, or there was currently no effect on the instruction offered because of the coronavirus pandemic. For schools, this variable is S1906. Because schools may have completed the School Questionnaire at any time during the 2020-21 school year, this variable cannot be used to provide information about the distribution of inperson, hybrid, or remote instruction at any given point in time. This contextual variable provides information about the circumstances under which the survey was completed and does not capture information about a school's official operating status(es) during the 2020-21 school year. Table C-2 provides additional information about the percentage distribution of schools reporting the effect of COVID-19 on instruction by school type and selected school characteristics.

Table C-2. At the time the School Questionnaire was completed, percentage distribution of K-12 schools reporting how COVID-19 affected instruction, by school type and selected school characteristics: 2020-21

| School type and selected school characteristic | Offering only distance-learning instruction | Offering a hybrid of inperson and distance-learning instruction | Offering only in-person instruction or no effect on the instruction offered |
| :---: | :---: | :---: | :---: |
| All schools | 16.6 | 68.2 | 15.2 |
| All public schools | 19.4 | 72.5 | 8.0 |
| School classification |  |  |  |
| Traditional public | 18.6 | 73.2 | 8.2 |
| Charter school | 27.2 | 66.4 | 6.4 |
| Community type |  |  |  |
| City | 30.6 | 66.1 | 3.3 |
| Suburban | 21.7 | 73.5 | 4.9 |
| Town | 11.2 | 76.8 | 11.9 |
| Rural | 8.9 | 76.0 | 15.0 |
| School level ${ }^{1}$ |  |  |  |
| Elementary | 18.9 | 74.2 | 6.8 |
| Middle | 19.5 | 74.5 | 6.0 |
| Secondary/high | 22.5 | 69.8 | 7.6 |
| Combined/other | 13.5 | 64.3 | 22.3 |
| Student enrollment |  |  |  |
| Less than 100 | 17.6 | 61.0 | 21.4 |
| 100-199 | 18.8 | 68.9 | 12.4 |
| 200-499 | 18.0 | 73.6 | 8.4 |
| 500-749 | 20.6 | 74.2 | 5.2 |
| 750-999 | 22.6 | 74.0 | 3.4 |
| 1,000 or more | 21.6 | 74.2 | 4.2 |
| Percent of K-12 students who were approved for free or reduced-price lunches |  |  |  |
| 0-34 | 15.9 | 72.1 | 12.0 |
| 35-49 | 14.4 | 75.0 | 10.6 |
| 50-74 | 17.6 | 74.0 | 8.3 |
| 75 or more | 24.1 | 71.4 | 4.6 |
| All private schools | 6.0 | 51.5 | 42.5 |
| School classification |  |  |  |
| Catholic | 5.5 | 62.7 | 31.8 |
| Other religious | 4.3 | 41.1 | 54.5 |
| Nonsectarian | 10.0 | 59.9 | 30.1 |
| Community type |  |  |  |
| City | 9.5 | 61.4 | 29.0 |
| Suburban | 6.3 | 62.2 | 31.6 |
| Town | $\ddagger$ | 37.8 | 60.7 |
| Rural | 2.3 ! | 26.0 | 71.6 |
| School level ${ }^{1}$ |  |  |  |
| Elementary/middle | 5.0! | 43.9 | 51.1 |
| Secondary/high | 10.5 | 63.9 | 25.5 |
| Combined/other | 5.5 | 51.6 | 42.9 |

See notes at end of table.

Table C-2. At the time the School Questionnaire was completed, percentage distribution of K-12 schools reporting how COVID-19 affected instruction, by school type and selected school characteristics: 2020-21-Continued

| School type and selected school characteristic | Offering only distance-learning instruction | Offering a hybrid of inperson and distance-learning instruction | Offering only <br> in-person <br> instruction or no effect on the instruction offered |
| :---: | :---: | :---: | :---: |
| Student enrollment |  |  |  |
| Less than 100 | 6.8 | 37.7 | 55.5 |
| 100-199 | 4.3 | 58.0 | 37.7 |
| 200-499 | 6.3 | 69.2 | 24.5 |
| 500-749 | 2.9! | 73.6 | 23.5 |
| 750 or more | 9.1! | 76.0 | 14.9 |

! Interpret data with caution. The coefficient of variation (CV) for this estimate is between 30 percent and 50 percent (i.e., the standard error is at least 30 percent and less than 50 percent of the estimate).
$\ddagger$ Reporting standards not met. The coefficient of variation (CV) for this estimate is 50 percent or greater (i.e., the standard error is 50 percent or more of the estimate).
${ }^{1}$ Elementary schools offer at least one grade of $K$ to 4, and the number of elementary grades is higher than the number of middle grades. Middle schools offer at least one of grades 5 to 8 , and the number of middle grades is greater than the number of elementary or secondary grades. Secondary/high schools are defined as schools that enroll students in more of grades 9 through 12 than in lower grades. Combined/other schools include all other combinations of grades, including K-12 schools. School level categories in the 2020-21 NTPS differ from those in previous survey administrations; caution should be exercised when comparing estimates by level over time. For more information, see Appendix C: Description of Variables.
NOTE: Data are weighted estimates of the population. Schools were asked to report the current effect of the coronavirus pandemic (COVID-19) on instruction at the school at the time they completed the survey. Thus, this was the reported effect on instruction reported at the time the survey was completed, not a summary of the school year. Detail may not sum to totals because of rounding.

[^0]:    ${ }^{1}$ NTPS is a redesign of the Schools and Staffing Survey (SASS). NTPS was introduced in the 2015-16 school year and administered again in 2017-18 and 2020-21.
    ${ }^{2}$ Public schools include traditional public and charter schools.
    ${ }^{3}$ While SASS included both public and private sector schools, principals, and teachers, the 2015-16 administration of NTPS only included the public sector. The 2017-18 and 2020-21 administrations of NTPS included both public and private sector schools.

[^1]:    ${ }^{4}$ The questionnaire asked how many students had an "Individual Education Plan (IEP)." This is also known as an "Individualized Education Program."

[^2]:    ${ }^{5}$ Includes non-law enforcement security guards or security personnel.
    ${ }^{6}$ Includes career law enforcement officers with arrest authority, who have specialized training and are assigned to work in collaboration with school organizations (School Resource Officers), and sworn law enforcement officers who are not School Resource Officers.

[^3]:    ${ }^{7}$ Special program emphasis schools include schools such as science or math schools, performing arts schools, talented or gifted schools, foreign language immersion schools, etc.
    ${ }^{8}$ Alternative/other schools offer a curriculum designed to provide alternative or nontraditional education and do not specifically fall into the categories of regular, special program emphasis, special education, or vocational school.
    ${ }^{9}$ Special education schools primarily serve students with disabilities.
    ${ }^{10}$ Career/technical/vocational schools primarily serve students being trained for occupations.
    ${ }^{11}$ Early childhood program or day care centers include schools with transitional first grade as the highest grade offered.
    ${ }^{12}$ Physical sciences includes chemistry, physics, and earth science.

[^4]:    ${ }^{1}$ For more information about CCD, see https://nces.ed.gov/ccd/.

[^5]:    ${ }^{2}$ The NTPS school package contained a letter to the principal or survey coordinator, a sealed envelope containing a letter with login information for the TLF, a sealed envelope containing a letter with login information for the Principal Questionnaire, and a sealed envelope containing a letter with login information for the School Questionnaire.
    ${ }^{3}$ The consistency edits identified inconsistent entries within each case and, whenever possible, corrected them. If the inconsistencies could not be corrected, the inconsistent entries were deleted.
    ${ }^{4}$ Blanking edits deleted answers to questions that should not have been filled in (e.g., if a respondent followed a wrong skip pattern).
    ${ }^{5}$ Data were added to questionnaire records during the logic edits, which filled in some items where data were missing or incomplete using other information on the same questionnaire or from other related data sources.

[^6]:    ${ }^{6}$ For the formula used to calculate the unit response rate, see 2012 Revision of NCES Statistical Standards: Final (NCES 2014-097).

[^7]:    See notes at end of table.

[^8]:    ${ }^{7}$ For the formula to calculate the item response rate, see 2012 Revision of NCES Statistical Standards: Final (NCES 2014-097).
